

Blythe Diva

Your Complete Walkthrough & Test Guide

A guided tour of your new platform. Follow it top to bottom, click every link, and feel what your customers and your team will experience. By the end you will have touched every feature and seen exactly why this replaces five separate tools.

Live site https://yogendra-ry342315-6737s-projects.vercel.app	Console passcode blythe2026	Approval OTP 482913
---	---------------------------------------	-------------------------------

Tip: open the site in two tabs — one as a customer (the storefront) and one as the owner (the console). Keep your phone handy for the mobile feel. Everything you do as owner shows up instantly on the customer side.

The Storefront	Your premium online shop — for customers & retailers	/shop
The Owner Console	Your control room — for you & your staff (passcode-locked)	/admin

PART A — The Storefront (what your customers feel)

1. Home — the first impression

■ [Open the shop](#)

Do this: Scroll slowly, top to bottom.

Feel this: The emerald-and-gold luxury mood, moving hero, promo bar, Shop by Category, Bestsellers with real star ratings, festive banner and Happy Divas testimonials.

Notice: ratings come from 378 real seeded reviews — not the identical fake “4 Review” the old site showed everywhere.

2. Browse a category — like GIVA / Kalyan

■ [Necklaces](#)

■ [Earrings](#)

■ [Bracelets](#)

■ [Anklets](#)

■ [Rings](#)

Do this: Use the price filter, tick In-stock only, change Sort (price / rating).

Feel this: How fast a shopper finds exactly what they want.

3. A product page — the heart of the sale

■ [Rajwadi Kundan Necklace Set](#)

Do this: Look at everything on this page.

Feel this: Image gallery, live price with discount + savings, colour options, Add to cart, WhatsApp fast-lane, full AI-written description + specs, rating breakdown, reviews, and “You may also love” recommendations.

Notice: every word here — title, description, SEO — was written by AI in seconds, not 15–30 minutes by hand.

4. Diva — your 24×7 AI shop assistant

■ [Open any storefront page, click the ♦ button \(bottom-right\)](#)

Do this: Ask: “show me kundan earrings under ■500” or “what’s good for a wedding?”

Feel this: A live assistant that knows your catalogue, prices, stock, shipping and returns — answering customers day and night.

5. Wishlist → Cart → Checkout (place a real order)

■ [Wishlist](#)

■ [Checkout](#)

Do this: Tap the ■ heart on a product, open the Wishlist, Add to bag, then Checkout and Place order (COD).

Feel this: A real order just dropped your stock and updated your books — you’ll see it in the console.

6. Track an order — like Amazon

■ [Order tracking](#)

Do this: Paste the order ID and track it on the status timeline.

7. Shoppable Reels — mapped to products

■ [Reels](#)

Feel this: Short videos that link straight to the exact products in them — turning content into sales.

8. Search

■ [Search](#)

Do this: Search a material or occasion (e.g. kundan, wedding) — it understands meaning, not just keywords.

9. Trust pages — what great shops always have

■ [About](#)

■ [Contact](#)

■ [Shipping](#)

■ [Returns](#)

■ [FAQ](#)

■ [Size & Length Guide](#)

Feel this: Every page a customer needs to trust you and buy with confidence.

10. Wholesale doorway (for retailers)

■ [Wholesale](#)

Feel this: A separate trade entrance for your bulk / retailer buyers.

PART B — The Owner Console (minutes, not hours)

Sign in first: [/admin](#) → enter passcode **blythe2026**. The console is locked — only you get in.

11. Dashboard — your business at a glance

■ [Dashboard](#)

Feel this: Animated revenue chart, channel donut, key numbers, the order you just placed, plus dead-stock and low-stock action lists.

12. Add a design live — under a minute

■ [Add Inventory](#)

Do this: Pick a category, add a product (name, price, qty), Save — then see it live on the storefront. You can also bulk-upload a CSV and let AI build all pages.

13. Product Photos — raw shot → studio model photo

■ [Product Photos](#)

Do this: Upload a raw phone photo of a piece, click ■ **Generate model photo**.

Feel this: AI turns it into a professional model shot reproducing your exact design, and the raw photo auto-disappears so only the polished image shows. Add angles with + Add angle. No photographer, no studio.

14. Catalogue — AI on every product, full editor

■ [Catalogue](#)

Do this: Click ✎ Edit on any product to change every field — name, category, price, stock, description, tags, specs and SEO. Or click Generate to have AI rewrite the page; ■ Build recommendations powers “you may also love”.

15. Categories

■ [Categories](#)

16. Inventory intelligence + AI Reorder

■ [Inventory](#)

■ [AI Reorder](#)

Do this: Change the rule (e.g. 30 days / ≤ 2 pcs) to re-classify dead/low stock, then Generate AI reorder plan and Approve & notify.

Feel this: The system tells you what to buy and what to clear, with reasons — you oversee in minutes instead of guessing for hours.

17. Your books — Vyapar-style, built in

■ [Billing / POS](#)

■ [Estimates](#)

■ [Returns](#)

■ [Purchases](#)

Do this: Ring up a POS sale and print a GST invoice; quote an estimate and convert it; record a return; log a supplier bill and let it suggest your SKU.

Feel this: POS, invoices, estimates, returns and purchases — all inside the same system as your shop. No separate app, no two-user limit.

18. Customers & marketing recovery

- [Customers \(CRM\)](#)
- [Abandoned carts](#)
- [Reviews](#)
- [Reels manager](#)

Feel this: Customers ranked by spend, abandoned-cart recovery with a WhatsApp nudge, AI-drafted review replies, and reel-to-product mapping.

19. Control & people

- [Approvals](#)
- [Roles](#)
- [Notifications](#)

Do this: In Approvals, a staff price-edit is waiting — enter OTP 482913 to apply it.

Feel this: Sensitive actions need your OTP. Roles gives custom permissions; Notifications is the who-owns-what registry.

20. Growth — SEO & analytics

- [Analytics & SEO](#)

Feel this: SEO health, location-aware metadata, sitemap and Google Analytics (GA4) links — proof you can hand to anyone running your marketing.

PART C — Five “wow” moments to feel deliberately

1. [Raw photo → studio model shot](#)
2. [Add a design and watch it go live](#)
3. [Talk to Diva, your AI assistant \(💎 on the storefront\)](#)
4. [AI Reorder plan — the system thinking for you](#)
5. [Place an order and watch stock + books update](#)

PART D — Feel it on mobile

Open the storefront on your phone: <https://yogendra-ry342315-6737s-projects.vercel.app/shop>. Browse, add to cart, and open Diva. Most customers shop on mobile — this should feel effortless in your hand.

Why this is worth it — old site vs. Blythe Diva

	Old site (BrainyBuzz)	Blythe Diva platform
Listing a design	15–30 min, manual	Under 60s, AI-drafted, one tap
Product photos	Hire a studio	Raw snap → AI studio shot
Ordering	WhatsApp links only	Real store + cart + COD + AI assistant
Social proof	Identical fake “4 Review”	378 real reviews + ratings
Pricing	Per item, manual	One formula re-prices everything

Inventory	"How much left?" = guess	Live dead/low + AI reorder plan
Your books	Separate app, 2 users	Built-in POS, invoices, estimates, returns, purchases
When a human is needed	You're pulled into everything	System notifies the right person, with the answer

Take your time with it. Click freely — nothing here can break, and this is your demo data to play with. When you're happy, we'll plug in your real pricing formula, invoice format, WhatsApp number, shipping account and your actual product photos, and you're live.
